SLEEP REVOLUTION CONTINUES AT Yataş Bedding

**Everyone dreams of a comfortable sleep.
Yataş Bedding turns those dreams into reality.**

We spend about a third of our lives sleeping;
the rest depends on how our sleeping hours pass.
A peaceful sleep brings with it a happy day.

**To have a quality and healthy sleep
is not a privilege, but a necessity.
Increasing your quality of life depends on it.
Such a sleep is everyone's right.**

Therefore, as Yataş Bedding, we work with care and discipline
in the direction of our sense of commitment and responsibility
principles that we feel for you, and we develop ourselves
constantly. We are pioneering for your convenience by producing
new technologies for every age and body type. Everytime we
meet you, we take pride in being worthy of your trust.

For a unique sleeping experience millions of people dream of
Mattresses, Quilts, Pillows from Yataşss!

SMARTMATCH

PERFECT MATTRESS SEARCH SYSTEM

Find the best mattress for you easily Perfect Mattress Search System

Unconscious and trial-and-error mattress choices affect sleep quality and human well-being. In order to prevent all these negativities, we have prepared Smart Match Mattress Finding Analysis with algorithms which are the result of detailed researches carried out by Yataş Bedding Sleeping Laboratories. The Smart Match application allows you to easily find the right mattress for yourself by evaluating your specific information and sleeping needs.

Gender

Even if the height and weight measurements are the same, the body structure, weight distribution and spine patterns of men and women are different. For this reason, although the mattresses are designed as unisex, the most accurate analysis is structured with the knowledge of gender.

Age

Age changes the need for support of the spine, independently of height, and weight.

Sleep Position

Mattresses have different adaptability according to sleeping position. Therefore, sleep position information is a very important parameter for mattress-body mapping.

Height - Weight

Stature changes the pressure applied to the mattress. It directly affects the support that the mattress gives to the spine. Weight is an important parameter that determines how much support the mattress should provide for the correct spinal position.

Pain Area (if any)

The pain felt during sleep decreases the quality of sleep, while the pain felt after sleep reduces the quality of life. To reduce pain, a body-compatible mattress should be selected.

Sweating Problem (if any)

Mattresses that absorb moisture from sweating and remove from the body, and dry up quickly and reduce the feeling of wetness, help to increase sleep quality.

Allergy Risk (if any)

If you feel nasal obstruction or pruritus irrespective of the season, you may have dust mite allergy. It is recommended that asthma patients choose mattress that provide protection against dust mites.

After you answer the questions in a complete and correct way, you will be ready to meet with Yataş Bedding sleep with the results that will be sent to your e-mail address.

Visit **yatasbedding.com** and discover the best mattress options for you with **Smart Match**.

Hybrid Series

Simplicity and glory all together...

As Yataş Bedding, we have brought together different materials and sleep Technologies and designed the new Hybrid Series mattresses, which are most suitable for the human anatomy and support the spine perfectly. This we call the science of sleep. In the light of science and technology, we are happy and proud to create something new, that touches people's lives in the most direct way.

SKIN FRIENDLY MATTRESSES WITH THE IDEAL PH VALUE

Our skin acts as a layer that balances the effect of environmental factors. This layer consists of sweat, fatty acids and amino acids, and wraps our body like a mantle.

The functional significance of this overcoat that it is acidic. This acidity is measured by the pH value. The ideal balanced pH value for our skin's health is 5,5. This pH value ensures that our skin remains moist and protected against the microbe.

As Yataş Bedding we are doing all the controls on this value which is important for our skin health and we choose our fabrics carefully. In our mattresses we offer you a pleasant sleep as well as skin health.

“Sleep like a royal...”

Hybrid Series / Special Collection

King Master Hand Made

Yataş Bedding celebrates its craftsmanship of sleeping quality for nearly half a century with the King Master Handmade.

NEW

KING MASTER
HANDMADE & ADAPTIVE COMFORT

Hybrid Series / Special Collection

King Master Hand Made

Hi-Low spring system of long and short springs in its core and Posturflo HD spring technology consisting of the smallest pocket springs in the world provides excellent support to the spine while providing a better rest by wrapping the body with its natural latex layer. The mattress offers personalized sleep comfort with its support buttons that can be adjusted in different degrees of hardness.

Smallest Pocket Springs in the World!

Posturflo HD

Posturflo HD spring technology consists of the smallest pocket springs that are only 20 mm in height and 33 mm in diameter, and is ultra breathable. Its high elasticity envelops the body and provides the right support for every pressure point.

Personalized Comfort

Hi-Low

This unique pocketed innerspring system strategically positions coils of varying heights in the same row, maximising product comfort, support and versatility. Initial softness provided by the responsive head of the tall coil is followed by the firmness provided by the compressed tall coil combined with the shorter support coil.

Adjustable Firmness Degree

Special Apparatus

With the special apparatus at the bottom of the bed that can be adjusted in 5 different degrees of firmness, it provides a reflux position thanks to the bed height that changes with the firmness degree, as well as obtaining different mattress firmness for couples.

Unique Comfort

Natural Latex

Latex is a unique filling material, in addition to its naturalness. Due to its flexible structure, absorbs excessive pressure and reduces the effect of turning movements during sleep, providing a much more comfortable sleep in fewer positions.

INNERSPRING TECHNOLOGY

“The mattress with the world's first memory spring system from Yataş Bedding: Smart Track.”

Hybrid Series / Special Collection

Smart Track

Smart Track Mattress, providing the unique surrounding feeling of the Visco technology with the enhanced spring system Memory Coil, offers a sleeping experience that you have never felt before.

WHY BUY A HYBRID MATTRESS

Yataş Bedding's **HYBRID SERIES** mattresses, which are composed of various combinations of the most advanced spring, visco, foam, latex, gel and fabric technologies which are suitable for all kinds of body types and satisfy personal comfort and needs, provide an uninterrupted and unique sleep experience.

If the problem is the mattress, the solution is Yataşşş..

A woman is lying on her back on a white hybrid mattress. The mattress is shown in a cutaway view, revealing its internal layers: a top layer of white foam, a middle layer of yellow foam, and a bottom layer of white coils. The woman is wearing a white tank top and white shorts. Six callout lines point to different parts of her body, each with a corresponding text box explaining the benefit of the mattress for that area.

Head and Neck Pains
Spinal friendly structure eliminates strains in neck muscles and prevents head and neck pains.

Waist and Spinal Support
Protects the natural spinal curvature of the body and prevents spinal deformations and waist pains by providing special support for each body type.

Protection of the Muscles
Positively affects your sleeping position and prevents muscle strains due to the pressure that it applies to your body.

Back Pains
Its advanced design protects and correctly supports the spinal curvature's natural s-shape and prevents waist and back pains.

Hip and Joint Pains
Provides particular support to hip area which is the most sensitive one of the spine, prevents hip and joint pains.

Poor Circulation
Adapts to body movements during sleep and positively affects blood circulation due to the pressure it applies.

Hybrid Series / Special Collection

Smart Track

The Memory Coil system in Smart Track Mattress ensures that your mattress is more breathable and prevents unintentional spring movements. Fitting perfectly to the convex regions of the body such as head, neck, waist and hips, responds to body movements instantaneously. Smart Track Mattress provides the same level of comfort to different body types with the utilized pocket spring system.

Natural Friend of Your Body

Hybrid Design

Due to special spring technologies which are used in the Smart Track mattress, less pressure is being applied to tissues and blood circulation is being regulated. Sleep quality tests conducted in Japan reveal that the Smart Track mattress reduces toss and turns at night by 24%.

Memory Spring System

Memory Coil

The first coil system with a “memory”, the Memory Coil provides the unique surrounding feel with its enhanced spring systems and ensures that your mattress is more breathable via increased air circulation compared to standard visco foam.

Smart Support

Pocket Spring Technology

Individually packaged and independently functioning springs provide excellent adaptation to different body types and provide accurate spinal support by supporting body folds.

Comfortable Technology

FWT (Fine Wire Technology)

The advantages of narrow diameter and thinner springs turn to perfect comfort thanks to Fine Wire Technology and you get to enjoy the unique comfort of Memory Coil.

Thermal Comfort System

Feran Ice®

The Feran Ice® technology provides the optimal micro climate for a better night's sleep and keeps the extra heat, or moisture, away from the sleeping surface and provides a cool sleeping environment.

DEEP SLEEP FOR A REJUVENATED BODY...

Body movements are restricted with mattresses that do not support the body or that react slowly to movements during sleep. Active Support Technology® is used in the springs of Leggett&Platt, a prominent spring technologies manufacturer, allowing the springs in the mattress to immediately adjust to sleep movements, and support the body for an active and relaxing sleep.

Active Support Technology® balances the moisture and temperature by providing circulation between the springs in the mattress innersprings sleep up to 28% cooler than foam.*

*Research conducted by Kansas State University and the Institute of Environmental Research.

yataş bedding

“American mattress type spring, a silent and infinite comfort”

Hybrid Series / Special Collection

Ergocoil Infinity

The Ergocoil Infinity mattress, co-developed by Leggett & Platt and Yataş Bedding, provides double coil count and double comfort compared to standard spring systems. With the high comfort of the Ergocoil Infinity mattress, waking up tired will become history!

Ergocoil Infinity

Ergocoil Infinity offers you waist support thanks to the UltraWaist system that has been exclusively designed for Yataş Bedding and private sleeping temperature thanks to the Adaptive™ technology. Yataş Bedding's special Ergocoil™ infinite spring system supports the spine correctly and prevents waking up feeling tired.

Shhh Ultra Silent Mattress

Ergocoil spring system, used in Ergocoil Infinity mattresses, is extremely noise free over after years.

Doubled Sleep Quality Ergocoil™

The Ergocoil Infinity mattress increases your sleep comfort dramatically due to high coil count. It offers double the number of springs compared to conventional mattresses and thus much more support. Compared with standard coil shapes, Ergocoil™ provides greater coverage with its continuous wire design. This results in mattress upholstery layers staying where they should – on top of the coils for maximum cushioning and support.

Specialized Lower Back Support UltraWaist Lower Back Support System

UltraWaist Support system provides support and comfort for the waist and hips, which is the most vulnerable area of the backbone, and offers personalized waist support with its special soft-textured polymers for everyone, no matter what BMI or body type.

Infinity Springs that Can Withstand 240.000 Impacts Ergocoil™

Featuring a unique, cross-laced design, Ergocoil™ provides a more supportive sleep surface by using a single, continuous length of high-performance wire for each row of springs. Tested for durability: no damage after 240.000 impacts.

67% Better Humidity Control Adaptive™

In the exact same environment, women may feel cold while men may feel hot. Intelligent material & design award winning Adaptive™ technology mimics the actions of a smart air conditioner by distributing the humidity 67% better and evaporating it at a 25% faster rate. In other words, the Adaptive™ technology offers personalized sleeping temperature.

Say Goodbye to Fatigue Active Support Technology®

Active Support Technology® of innersprings allows your muscles to relax in a more natural position. The coils adjust instantly to your sleep movements, comforting and supporting your body actively as you dream on.

Clean Sleep Ergocoil™

The removable box pillow top of Ergocoil Infinity enables you to dry clean your pillow top any time.

ZERO GRAVITY
LATEX

HOW DOES YOUR MATTRESS AFFECT THE HEALTH OF YOUR SPINE AND QUALITY OF SLEEP?

A correct mattress is essential for a good sleep. Wrong choice of mattress creates pressure on the muscles, nerves and veins, and thus causing lumbar and back pain. It is important to preserve the spine curve of the body during sleep.

Give due consideration when choosing a mattress!

At Yataş Bedding, each mattress is manufactured with the objective of preventing lumbar and back pains, and protecting the health of your spine. You need to choose the correct mattress for an uninterrupted and sound sleep without turning left and right, or experiencing lumbar and back pain. The first step to getting a quality sleep is to become informed regarding the technologies used on your mattress.

Specialist Opinion

DEFINITION OF QUALITY SLEEP

Medicana Çamlıca Hospital
Pulmonology Specialist
Spec. Dr. Ertuğrul Serdar AKIN

“The definition of insomnia and sleep disorder can vary from person to person, the most common case we face is having difficulties at falling asleep. Staying asleep after having falling asleep is another form of sleep disorder. Stress and sleep disorders are diseases of the new age and they decreases the quality of life and cause many diseases.”

Uninterrupted and regular sleep, which are very important for our health, affect our comfort and standard of living the next day. In particular, these conditions affect overweight patients with respiratory disorders such as asthma and copd or disorders such as hypertension, coronary failure. It is important that patients with this type of disorders should have a proper mattress and pillow to ensure a smooth and comfortable sleep. In addition, we recommend patients with neck complaints, such as cervical disc hernia and reflux to pay strict attention to the correct selection of mattress and pillow and patients with allergies should select antiallergic mattresses and pillows.

The selection of mattresses and pillows is becoming more important as generally we sleep away one-third of our lives. Therefore, we emphasize and advise all our patients paying attention to mattress and pillow selection.

“Maximum cool feeling thanks to Copper Cool Technology”

Hybrid Series / Special Collection

Cool & Wool

The 5-Zone Pocket Spring system features independent springs of varying firmnesses, which adapt to the body types of couples sleeping on the same mattress and relieve their joint pains.

NEW

Hybrid Series / Special Collection

Cool & Wool

Copper Cool technology, developed on the basis of the characteristics of the copper element, reduces the time of falling asleep by allowing the body temperature to be distributed to the mattress surface with the copper powders in it. Thus, it offers a relaxing and comfortable sleep experience. Combining Yataş Bedding’s experience in mattress production with technology and innovation, Cool & Wool mattress helps to reduce sweating thanks to its special design and refreshing fabric effect. The natural Woolmark wool on its other surface provides you a warm and healthy sleep environment during the winter months.

Perfect Support for Your Body 5-Zone Pocket Spring System

The 5-Zone Pocket Spring system features independent springs of varying firmnesses, which adapt to the body types of spouses sleeping on the same mattress and relieve their joint pains.

Yataş Bedding Exclusive Cooling Technology Copper Cool Technology

Developed based on the natural properties of the copper element, Copper Cool Technology helps to reduce sweating by allowing body heat to disperse on the mattress surface with the copper molecules it contains. It helps shortening the time to fall asleep. As a result of this, offers a more relaxing and comfortable sleeping experience.

Variable Zone Body Suspension System VZS™

The Double Decker-Mattress’s variable zone body suspension system provides high-comfort and proper body support. It applies less pressure at convex points such as shoulders, basins and joints and thus allows you to feel less fatigue.

Health Benefits of Pure Wool Woolmark®

Woolmark®, 100% natural and the purest wool in the world, breathes, relaxes the heart rate and regulates body temperature.

Innovative Technologies

Have the comfort that is
special for you

Exceptionally comfortable, uninterrupted and tailor-made sleep is made possible only with extra features on your mattress. Selective Series is created with the spring, visco, foam, fabric technologies and their combinations with aspirations to provide additional benefits for you. You are assured of an uninterrupted and comfortable sleep that you dream of with Selective Series mattresses, which are manufactured by combining various state of the art technologies.

WHY DOES QUALITY OF SLEEP MATTER?

Quality of sleep is vital to remain relaxed physically and mentally during the day. Frequently interrupted sleep or incomplete sleep without getting a rest causes adverse effects such as tiredness, lack of concentration, stress and labor loss. Sleeplessness poses a threat to your immune and repair system especially when it becomes chronic. It increases the risk of infection and various illnesses. A good sleep improves the quality of your life. The body repairs itself most effectively during sleep and provides the opportunity to recover from the physical, mental and emotional stress of the day. If you pay attention, you will see that we feel irritable, ill-tempered or tepid when we go to bed late or do not get enough sleep for a couple of days consecutively. Good and regular sleep is necessary for a healthy emotional growth.

How Long Should a Good Sleep Last?

A healthy adult needs between seven and nine hours of good quality sleep a night. This duration may change, depending on our diet or the day's circumstances. The body would require more time to rest following a busy day of physical and mental activity. Malnutrition or a heavy diet takes away from the quality of our sleep, whereas nutritional meals will help our body recover faster and feel more energetic.

Orthopedic Support

Right support with a special Pocket Spring Technology developed for those, who want a hard mattress!

Orthopedic Support

Orthopedic Support mattress, specially developed with Yataş Bedding’s Propocket 2.1™ spring technology to provide the most accurate support for your back and waist area, is ideal for those, who prefer a hard mattress. Orthopedic Support, which has a harder and stronger mattress surface thanks to the special spring system of Propocket 2.1™, provides the right support by wrapping your body better. While the surface of the mattress hardens, the orthopedic structure does not deteriorate.

Special Propocket 2.1™ Spring System for Hard Mattress Seekers

ProPocket 2.1™ springs are new generation, reinforced pocket springs. ProPocket 2.1™ springs, developed by increasing the wire thickness by almost 9%, are longer lasting and durable as well as being harder without losing the comfort of the bed. In this way, the mattress provides a strong support by fully wrapping the whole body and a perfect sleeping surface is provided with high comfort.

Maximum Pressure Distribution

Pillow Top

Orthopedic Support facilitates maximum pressure distribution with a comfort-improving sleeping pad and offers extra relaxation.

High Comfort Variable Zoning System

The variable-zone body suspension system of Orpedic Support mattress offers high comfort while providing proper support for your body. It causes less pressure at the convex points such as the shoulder, bases and joints, and most importantly prevents you from feeling tired.

Specialist Opinion

LYING POSITIONS AND IMPACTS ON THE BODY

Medicana Çamlica Hospital
Physical Therapy and
Rehabilitation Specialist
Prof. Dr. Tunç Alp KALYON

“It is imperative that a proper lying position has to be taken for the spinal cord which gets tired during the day and to relax the muscles.”

The spine, which provides the basic support of our body, consists of 33 bones arranged on top of each other. Among the vertebrae are cartilage cushions called "discs", and in between the discs is a gel-like core. The spinal cord is a nervous tissue that goes down to the waistline just after it leaves the brain. From there, 31 pairs of nerves come out to the right and left, and all this system is protected by the spine. Once these nerves have departed from the backbone, they are distributed to the arms, legs, or body and fulfil the functions of the senses and movements of the area they go to.

Not everyone has an ideal lying position. For example, some people sleep comfortably on the back position. This position is not preferred by couples especially because it increases the risk of snoring despite relieving the spine.

In the freefall position, on the other hand, there may be inconveniences such as pressure in the chest and abdominal cavities in addition to stretching the neck and waist spine. The most recommended lying position is side-position in accordance with the structure of the letter "S" of the spine. In this position the arms and legs should not be shrinking fully. The back and arms should be bent and the knees should be pulled slightly toward the abdomen. In particular, we recommend those who suffer from lower back and neck problems and pregnant women to lie in this position and avoid from the supine position. In addition to all these, the use of non-light curtains, with the average temperature of the bedroom being 21-22 degrees, will also facilitate a good quality and restful sleep.

“Hard & Soft offers two different hardness on the same mattress surface”

Selective Series / Innovative Technologies

Hard&Soft

The Hard&Soft Mattress, which offers in two different firmness level on the same sleeping surface...

NEW

Selective Series / Innovative Technologies

Hard&Soft

Developed to meet the need of the partners who seek different comfort on the same mattress surface exclusively with its design, Hard & Soft mattress offers a perfect example of the innovative design approach. It creates a suitable and comfortable sleeping environment which takes form according to different sleep habits of the partners by providing the opportunity of soft and hard comfort on a single surface.

Smart Support Pocket Spring Technology

Individually packaged and mobile springs perfectly adapt to different body types and provide the correct back support by supporting the curves of the body.

Two Different Comforts on the Same Sleeping Surface Hard & Soft

It creates the most suitable and comfortable sleeping environment for different sleeping positions by shaping according to different sleeping habits allowing the use of soft surface on one side and hard surface on the other side.

Uninterrupted Sleep FreeZone Technology

Prevents spouses from being disturbed by turns during sleep, FreeZone technology provides uninterrupted sleep throughout the night.

MAGNETIC SLEEP REVOLUTION WITH YATAŞ BEDDING TESLA SLEEP MATTRESS

Every living or inanimate being has a magnetic field, weak or strong. Human beings also need the ideal magnetic field to keep their lives healthy.

How does the magnetic field affect sleep quality?

If functions well, the magnetic energy-sensitive "pineal gland" in the brain will secrete the melatonin hormone, which regulates sleep rhythm, relaxes muscles and strengthens the immune system. The magnetic field improves blood circulation by acting on iron oxides in the blood and increases sleep quality.

“Your sleep quality is expanding!”

Selective Series / Innovative Technologies

Tesla Sleep

Meet ISMOB 2016 Design Award-winning Tesla technology with magnetic field capability and increase your sleep quality.

Tesla Sleep

International test results show that, woven with magnetic yarns, Tesla Sleep mattress with Tesla technology, increases sleep efficiency by 98% and REM sleep by 11%. Thanks to the pocket springs, which move independently, it provides high comfort while providing proper support for your body. Featuring a cool sleeping environment with Feran Ice® technology, the Tesla Sleep mattress also features Free Zone technology that prevents spouses from being affected by their turn. Moreover, it offers high comfort sleep with No-turn technology that does not need to turn the mattress.

Quality Sleep Tesla Technology

Tesla technology is available in the special fabric of Tesla Sleep mattress knit with magnetic yarns that show magnet characteristics. The magnetic energy-sensitive “pineal gland” in the brain will secrete the melatonin hormone, which regulates sleep rhythm, relaxes muscles and strengthens the immune system. In addition, the magnetic field improves blood circulation by acting on iron oxides in the blood. It has been scientifically proven through tests in a sleep laboratory in Japan that Tesla technology improves sleep quality through magnetic field.

High Comfort Variable Zoning System

The variable-zone body suspension system of Tesla Sleep mattress offers high comfort while providing proper support for your body. It causes less pressure at the convex points such as the shoulder, bases and joints, and most importantly prevents you from feeling tired.

Smart Support Pocket Spring Technology

Individually packaged and independently functioning springs provide excellent adaptation to different body types and provide accurate spinal support by supporting body folds. It also offers uninterrupted sleep thanks to Free Zone technology, which prevents you from being influenced by your partner’s turning movements.

Natural Touch Viscose Fabric

The viscose fibres produced by passing through the special processes of the woods obtained from certified forests are turned into yarn and fabric respectively. With their natural structure of cellulose, silky soft touch and high moisture absorption ability, viscose fibres are used in conjunction with the world’s most luxurious fibres.

FAST MOISTURE MANAGEMENT ON YOUR MATTRESS

High heat that is created during sleep causes uncomfortable sleep. Heated body sweats out the heat. Feran Ice® technology helps the mattress stay dry and provides a cool sleeping environment by quickly vaporizing the moisture that is created on the fabric of the mattress due to sweating. With a soft and flexible feel it gives to the fabric of the mattress, Feran Ice® is promising more than the sleep you are accustomed to.

Specialist Opinion

EFFECTS OF INSOMNIA ON HEART HEALTH

Medicana Çamlica Hospital
Cardiology Specialist
Assoc. Prof. Dr. Murat YALÇIN

“Poor quality sleep causes coronary failure, hypertension and cardiac arrhythmia symptoms to increase. For this reason, a good quality sleep is important for cardiovascular diseases i.e. disorders of heart and veins.”

Some of the hormones secreted at night during a good quality sleep are like sighs of relief for our cardiovascular diseases. The cardiovascular system which approximately works one hundred thousand times a day relaxes relatively at night. Thanks to these hormones, our heart rate slows down at night with the help of sleep, and our blood pressure values are reduced, allowing the cardiovascular system to lighten its burden. Poor quality of sleep or insomnia causes the heart rate and blood pressure during sleep at night to increase what may lead to cardiovascular diseases. One of these diseases is heart attack which usually occurs towards morning and is closely related to insomnia. Another cardiovascular disease is paralysis. While it is expected to decrease throughout the night, high blood pressure due to insomnia may invoke paralysis. Therefore, hormones secreted during a good quality sleep may protect against cardiovascular diseases.

In particular, disruptive rhythm disorders may occur when a sleepless night is spent after an intense day of work stress and fatigue. These are mostly rhythm disorders called extrasystoles, which occur mostly in form of stuttering heart attacks. Patients feel the deviancy in their heartbeat after a sleepless night other than a normal night. Therefore, a body that wakes up well rested and relaxed will be more at ease in terms of arrhythmia.

Specialist Opinion

INSOMNIA

Medicana Çamlıca Hospital
Neurology Specialist
Spec. Dr. Selda ÖZŞAHİN

“50% of people suffer from insomnia at some point in their lives. For these people, insomnia has a meaning beyond being unable to sleep, leading to failure in psycho-social and occupational areas, thus greatly reducing quality of life.”

In acute sleep disturbances ranging from 1 to 3 days, depending on change of place and medical conditions, a person may have gotten stressed or experienced an emotional trauma. In this case, the treatment is carried out by detecting the wrong behaviour and overcoming the fear of being conditioned “I can not sleep”. For sleep disturbances continuing more than a few days, a neurologist should be consulted. Since chronic sleep disorders that last more than 3 weeks are related largely to psychiatric causes, the underlying problem should be investigated very well. If a person’s biological clock does not match the sleep time, a long period of sleep disturbance may occur.

Alcohol, caffeine, smoking, stimulant use, a medical chronic or painful disease, and such neurological disorders as

Alzheimer’s, Parkinson’s, stroke can also cause long-term sleep disturbances. In such cases, it is not possible to resolve the sleeping problem unless the underlying problem is corrected first and the appropriate treatment method is used. In addition to these treatments, one can get rid of long-term insomnia and sleep disturbances by paying attention to sleep hygiene and consulting a medical specialist.

THE BIRTH OF A NEW AGE EUCALYPTUS TREE EXTRACT

Tencel® is a natural cellulosic fibre obtained from the eucalyptus tree extracts. It gives a cool and refreshing feeling to the sleeping environment. In short, Tencel® fabrics are as soft as silk, they are as cool as linen, and at the same time they have high durability.

With the experiments made, it has been proven that 65% of the moisture is rapidly removed from the body.

What are the advantages of Tencel®?

- Provides moisture management.
- It is completely breathable and remains dry.
- Tencel® regulates body heat balance and maintains skin moisture balance.
- It is suitable for sensitive skin.
- It is made from smooth fibre and soft touch.
- Helps to increase the comfort of sleep.
- It is renewed with nature.

“Give your guests a comfortable sleep experience”

Guest Bed

Compact Guest Bed

With its ergonomic design which can be set up and folded easily and stored without covering space in its own bag, the Compact Guest Bed offers smart solutions to various needs.

Guest Bed

Compact Guest Bed

The Compact Guest Bed provides your overnight guests a quality sleep experience with its unique comfort. In addition to being a mattress pad, you can use it either on the floor, on the armchair, or as a camping bed. Moreover, it can be converted into a queen sized mattress with a second Compact Guest Bed thanks to the combinable slide fastener design.

Easy to carry in a special zip-around bag.

Gets ready quickly and practically.

Can be converted into queen sized mattress thanks to the combinable slide fastener feature.

Your guest experience a nice sleep thanks to its usability on different level surfaces.

Supreme Comfort

HR Foam

Compact Guest Bed is manufactured with supreme comfort special HR foam that can respond to body movements very quickly. Due to its high air permeability, the continuously breathing HR sponge prevents problems such as malodour and perspiration.

Healthy and Hygienic

Washable Bamboo Fabric

Compact Guest Bed is washing machine-safe thanks to the bamboo fabric with the zip-around cover and therefore be used as clean as on its first day. The organic and natural bamboo fabric provides sleep temperature suitable for every season due to its dehumidifying feature.

Ease of Use

Foldable, Incapacious, Portable

Compact Guest Bed, is easily foldable and can be stored in its own bag thanks to its soft and light HR foam. It is incapacious when not in use. The chic bag enables the mattress to be carried with ease during travels and fits easily into car trunks.

Specialist Opinion

CHOICE OF MATTRESS & PILLOW

Medicana Çamlica Hospital
Physical Therapy and
Rehabilitation Specialist
Prof. Dr. Tunç Alp KALYON

“The choice of the wrong mattress and pillow will cause the natural curve in the waist and neck areas to deteriorate and invites spinal diseases.”

While a proper mattress helps to preserve the body's natural backbone, a wrongly selected mattress causes pressure on the muscles, nerves and veins, causing waist and back pain.

A good mattress should support the waist, back, head, neck and knee areas. The excessively stiffness of your mattress causes the formation of gaps between the body and the mattress, while the soft mattresses do not support the areas where the body is pressed. This causes some incarceration on the blood circulation and the brain is stimulated for blood circulation.

Therefore, you turn right and left many times during the night and cannot pass to deep sleep. When buying a mattress, firmness, softness and comfort of the mattress should be decided by lying on the mattress.

The material used in the mattress, the quality of the fabric on the exterior and the spring system used are very important.

Before making a decision, this information should absolutely be obtained about the mattress that is desired to be purchased.

The mattress should also protect the body heat. In order to prevent sweating and cold, attention should be paid to the technologies in the mattress or the summer-winter use characteristics.

For a comfortable and sound sleep choosing the ideal pillow is also very important. Lying without pillows is not good for neck health and sleeping on very thick pillows is also inconvenient. Pillows that do not force the natural curve of the neck spine and that support it are the most convenient.

“Natural and refreshing sleep experience for four seasons”

DREAMLINE

Classic Series / DHT Spring Technologies

Dream Line

Dream Line promises a restful sleep with the comfort of pure wool and Aloe Vera.

NEW

DREAMLINE

Classic Series / DHT Spring Technologies

Dream Line

Dream Line mattress keeps your mattress as good as new for years to come due to DHT Spring system. On the winter side, Woolmark balances body temperature and heartbeat with its wool content, while the natural cotton layer used on the summer side creates a refreshing effect. Thanks to the Aloe Vera in the fabric, it preserves the freshness and elasticity of the skin.

Specialized Summer and Winter Comfort

Wool and Cotton Effect

Dream Line mattress features cooling, moisturizing cotton on the summer side and warm Woolmark® on the winter side, and balances body temperature.

Same Comfort for Years

DHT Spring Technology

The Yataş Bedding exclusive DHT spring system keeps your mattress in its original shape for many years, even only one side of the mattress is being used. Successful results were obtained from height loss and deformation and shape loss tests measured in compliance with results from international durability tests.

Health Benefits of Pure Wool

Woolmark®

Woolmark®, 100% natural and the purest wool in the world, breathes, relaxes the heart rate and regulates body temperature.

A Comfortable Sleep With Aloe Vera

Aloe Vera

Aloe Vera is a plant that protects the skin's elasticity and freshness. The Aloe Vera containing mattress fabric helps the body to relax.

Specialist Opinion

LINK BETWEEN SLEEP AND DIABETES

Medicana Çamlıca Hospital
Internal Medicine Specialist
Spec. Dr. Memduh CAYMAZ

“More than 70% of diabetics have sleep problems. Diabetics suffer under following emerging syndromes: snoring, sweating, excessive urination at night, waking up with dryness in the mouth, feeling tired when waking up, and daytime sleepiness.”

Diabetes is a common condition and its frequency is dramatically rising all over the world. According to a study conducted in the 2000's the frequency of diabetes in Turkey was around 7%; another study in early 2010's revealed that it was around 13%. This big number means an increase of almost 100%. Diabetes keeps snowballing all over the world. Studies have shown that sleep problems are more common among diabetic patients. Almost one in three diabetic patients has sleep problems. Diabetes itself can directly lead to sleep problems, and patients urinate excessively at night due to high levels of blood sugar.

Another concept is diabetic neuropathy; The high level of blood sugar among diabetic patients causes damages and devastation to the neural crest. Therefore, patients may feel burning, aches and pains in their feet at night. Also diabetics suffer from problems such as heart conditions, strokes more frequently and in parallel with that sleep problems arise.

Specialist Opinion

CONNECTION BETWEEN SLEEP AND DIET

Medicana Çamlıca Hospital
Nutrition And Dietetics Registered
Dietician Rd. Yavuz ÇELİK

“Even though our sleep pattern is determined by a genetic clock, environmental and biological factors also have a significant impact on the duration and quality of sleep. In particular, excessive and high-calorie food consumption, malnutrition, lack of movement during the day and depression are factors that reduce sleep quality.”

Sleep is an important vital physiological requirement, just as vital as nutrition or breathing is. For this reason, sleep should be seen as an important determinant of health, affecting the quality and comfort of the individual.

Sleep can be defined as the period of time when the individual is not active, his physical activities end and his/her body needs to rest. This period of time lasts 7-8 hours, but it may exceed 10 hours according to age group.

Adequate sleep quality, environment and conditions are essential for our body to be more vigorous and functional and ready for the next day. Going about some of these conditions; most important ones are physical conditions (sleep environment) and physiological conditions (Nutrition).

Examining nutrition in detail; selecting quantities and qualities of food that covers the needs of the individual would be our first pick, followed by foods which are easy to digest and methods of cooking of these foods and approximately 3-5 hours before sleeping the food consumption should be ended which is the necessary time needed for the foods to be digested. When the physical conditions are met:

- A warm shower if possible
- Clean mattress, flat sheet, duvet covers, pillows etc., relaxing pattern and colour selections
- Mattress selection
- Well ventilated room with optimal temperature
- Relaxing colours on the walls
- Dark and quiet environment

“Summer Bed offers a cool, comfortable and relaxed sleeping experience.”

Classic Series / DHT Spring Technologies

Summer Bed

Adaptive technology which has been awarded for its smart materials and design, ensures the ideal temperature for sleep, while humidifying cotton in its structure creates a refreshing effect. In this way, it eliminates interruptions during sleeping due to high temperature and sweating, especially in summer, while sanitized technology prevents bad odours that may occur in the bed and keeps the bed clean for years. It maintains its form for many years with its design that supports waist and spine and has highly durable structure.

Same Comfort For Many Years to Come

DHT Spring Technology

The Yataş Bedding exclusive DHT spring system keeps your mattress in its original shape for many years, even only one side of the mattress is being used. Successful results were obtained from height loss and deformation and shape loss tests measured in compliance with results from international durability tests..

67% Better Humidity Control

Adaptive™

In the exact same environment, women may feel cold while men may feel hot. Adaptive has received an award for intelligent material & design technology, and mimics the actions of a smart air conditioner by distributing the humidity 67% more and evaporating it at a 25% faster rate. In other words, Adaptive™ technology offers personalized sleeping temperature.

Let Your Baby Takes Advantage of the Benefits of Milk in Its Sleep...

Milky Fabric with milk fibers in Yataş Bedding Baby Mattresses!

Milk is one of the main food sources that we need most from birth and for the healthy development of our body. In addition to the numerous benefits of milk, casein proteins in it in particular also help to nourish the skin. Milky fabric, made from milk fibers to take advantage of these properties of milk, protects the sensitive skin of infants and your baby sleeps healthily.

- 💧 **Milk fabric allows the skin to breathe.**
- 💧 **Casein proteins contained in milky fabric nourishes and rejuvenates the skin.**
- 💧 **Balances the skin's moisture content.**
- 💧 **Balancing the moisture, helps to reduce wrinkles. Keeps skin soft and smooth.**
- 💧 **Air permeability makes it easier for your baby to breathe, even when lying face down.**

PURE SERIES | COTTONIA BABY MATTRESS

As one of Yataş Bedding mattresses made of natural materials that are beneficial for babies' health, Cottonia is made of coir and cotton. With moisture-resistant and breathable coir and cotton grown without hazardous substances, Cottonia offers a healthy and natural sleep environment that is also safe for your baby's sensitive skin, and puts your mind at ease.

The Most Natural Form of Sleep with Cotton and Coir

- Eco-friendly cotton
- Provides proper spinal support
- Moisture-resistant coir
- Breathable fibers
- Maintains the thermal balance both in summer and in winter
- Hygienic thanks to its washable cover
- 10±1 cm Mattress height
- 0-6 ages of Use
- Environmental and human health conscious hotmelt agglutination technology

THE COMFORT OF COCONUT
Moisture-resistant coir will help your baby sleep more comfortably.

A HYGIENIC SLEEP ENVIRONMENT
Cottonia offers a hygienic sleep environment with its washable pad.

THE FRESHNESS OF COTTON FOR BABIES
Babies get a refreshing and healthy sleep thanks to breathable and eco-friendly cotton.

PURE SERIES | ORGANICA BABY MATTRESS

As one of Yataş Bedding mattresses made of natural materials that are beneficial for babies' health, Organica is made of coir, cotton, latex, and wool. With coir, which provides proper spinal support; cotton; air-permeable Latex; and Woolmark®-certified natural wool, Organica is an ideal mattress for your baby to get a quality and perfect sleep just the way you want them to.

High-Quality Sleep
with Natural Materials and
Proper Spinal Support!

THE COMFORT OF COCONUT

Natural moisture-resistant coir will help your baby sleep more comfortably.

FLEXIBLE LATEX

Flexible latex adapts to the shape of your baby's body and supports your baby properly.

ANTIALLERGENIC COTTON WADDING

Organica has anti-allergenic and eco-friendly cotton wadding.

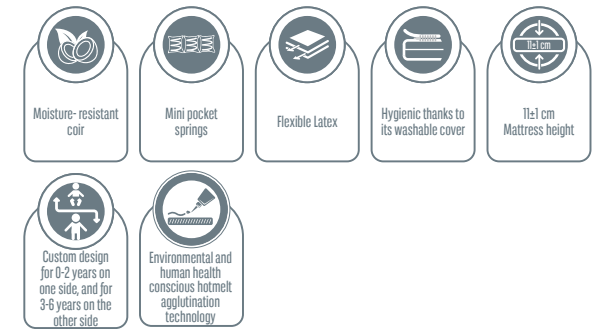

PURE SERIES | COPOLA BABY MATTRESS

As one of Yataş Bedding mattresses made of natural materials that are beneficial for babies' health, Copola is an ideal mattress for parents who want the best for their babies, with moisture-resistant coir, air-permeable latex, and Mini Pocket springs, which support a greater number of body parts.

The Best Materials
Are Combined for
Healthy Sleep!

Adjustable Bed Sets

Move-Up Master

Experience something brand new with the Move-Up Master Mattress that offers perfect sleep experience and comfort together by using the most advanced bedding technologies in the world. Move-Up Master, equipped with a motor which enables 5 zones to move separately, will offer unprecedented comfort.

Adjustable Bed Sets

Move-Up Master

With help of the motor that enables 5 zones to move separately, the Move-Up Master base can be adjusted to a favourable position and helps your body to be shapely, healthy and in form. It provides not only optimal environment and personal comfort in activities such as watching TV, reading, it also helps to eliminate physical disadvantages that can occur with increasing age. The movable head, neck and back zones facilitate sitting, straightening up or getting up.

Move Up Master Base 5 Separate Moving Zones

1 HEAD
Set at waist level, it provides an effective solution for disorders such as reflux and sleep apnea. Silent operation ensures uninterrupted sleep.

2 NECK
Provides a healthy and comfortable sleep thank to its anti-snoring position setting.

3 WAIST
Distributes your body weight evenly; helps prevent waist pains and muscle spasms.

4 BACK
Straightens your spine recover by keeping your back in an upright position.

5 FEET
Adjustable feet and head zones help for a healthy rest and regulation of the blood circulation.

Easy to ensconce thanks to the Pull Back mechanism

With the Pull Back mechanism, when the head zone of the mattress is lifted, the mattress slides back automatically without you having to pull it. By this means, you can put the Move-Up Master against the wall. In addition, thanks to this mechanism the furniture next to the mattress stay close to you, you can easily reach the desired furniture from the mattress and enjoy comfort at the highest level.

Control your mattress with the remote controller!

You can set your Move-Up Master Base to a desired position by controlling it with its controller. You can use the torchlight feature in the controller and experience the privilege of making comfort essential in your life.

“Ideal choice for optimum sleep comfort ”

Boxspring Series

Vita

Boxspring Series

Vita

The Vita Boxspring refreshes the body overnight, providing optimum support thanks to a double heat-treated DHT spring system in its base and pocket springs within the mattress. With its comfort enhancing and breathable structure, the HR topper makes your body relax and increases your sleep comfort.

Prolong the Life of Your Mattress
DHT Spring Technology

The base of the Vita boxspring consists of DHT springs developed by Yataş Bedding and its more than 30 years of experience in steel spring production. Unlike the standard Bonell springs, the durability of DHT springs increased with double heat treatment. The DHT springs, which is a spring system exclusive to Yataş Bedding, distribute the body weight evenly to all springs, maintaining their quality for years without any deformation. As a result of international durability tests, the measured height loss and deformation are little if any.

An important addition to comfort
HR Foam

HR foams are high-comfort foams that can provide the accurate support to the spine. The most important feature is that it can maintain its fast-responding and fast-recovering form for years. Thanks to the high breathing ability, they offer a refreshing sleeping environment.

Smart Support
Pocket Spring Technology

Individually packaged and independently functioning springs provide excellent adaptation to different body types and provide accurate spinal support by supporting body folds. In the Pocket Spring System, each spring operates separately, so the partners are not affected by each other's turning movements.

Colourful World of Yataş

Yataş Bedding continues to inspire those who want to present a modern, bold and privileged look to their homes with its Colorful Home Textile Collection. Yataş Home Textile products are available at Yataş Bedding stores and yatasbedding.com

Rediscover colors and awaken your emotions with the Colorful World of Home Textile Collection by Yataş.

Purity of —SLEEP—

Sleep, which covers almost a one third of human life, is a regenerating process in which the body repairs itself and stores the energy it needs every day. The most important factor which determines the quality of regeneration of the body along with the quality of sleep is the conditions and how this process is experienced as much as the sleep itself.

Yataş Bedding, which is a leader in White Bedding products with its innovative design concept, invites you to a healthy, comfortable, uninterrupted and quality sleep experience with the largest collection of pillows and quilts in Turkey. With its standard designs that do not compromise on quality and durability, with Dacron® products, the medical series that support the healing process of the body and natural filling materials suitable for human health such as bamboo, cotton and camel feathers, each day Yataş Bedding continues to enrich its collection.

“All you need for a good night’s sleep is Yataş Bedding...”
